Anaconda Prompt 執行程式方法

以執行 ackermann.py 程式為例: (Think Python Chapter 6, Exercise 6.2)

一、切換磁碟與資料夾,然後執行程式 例如:

```
E:\Lectures\Programming110B\notebook\chap06_new\ackermann.py - Notepad++
檔案(F) 編輯(E) 搜尋(S) 檢視(V) 編碼(N) 語言(L) 設定(T) 工具(O) 巨集(M) 執行(R) 外掛(P) 視窗(W) ?
🕽 🚽 🗎 🖺 🧸 🧖 🚰 🔏 🖟 🛗 🖒 🕩 🖒 🕽 🗲 🖒 🗥 🗽 🔍 🔍 🔍 📮 🚍 🖺 🟗 11 🃜 🗷 🚳 🚳 🐼 🐿 🕒 🖜 🗩
🔚 ackermann.py 🔀
     P"""This module contains a code example related to
      Think Python, 2nd Edition

      by Allen Downey
  5
      http://thinkpython2.com
      Copyright 2015 Allen Downey
  8
  9
      License: http://creativecommons.org/licenses/by/4.0/
      from __future__ import print_function, division
 13
 14
     □def ackermann(m, n):
          """Computes the Ackermann function A(m, n)
 16
 18
          See http://en.wikipedia.org/wiki/Ackermann function
 19
          n, m: non-negative integers
20
 22
          if m == 0:
              return n+1
 24
          if n == 0:
 25
              return ackermann (m-1, 1)
 26
          return ackermann (m-1, ackermann (m, n-1))
 27
 28
 29
    print(ackermann(3, 4))
```

二、修改 ackermann.py 程式,使其可以執行多次測試 利用 for 迴圈測試 function,例如:ackermann_new.py

```
"""This module contains a code example related to

Think Python, 2nd Edition
by Allen Downey
http://thinkpython2.com

Copyright 2015 Allen Downey

License: http://creativecommons.org/licenses/by/4.0/
"""

from __future__ import print_function, division

def ackermann(m, n):
    """Computes the Ackermann function A(m, n)
```

```
See http://en.wikipedia.org/wiki/Ackermann_function

n, m: non-negative integers
"""

if m == 0:
    return n+1

if n == 0:
    return ackermann(m-1, 1)

return ackermann(m-1, ackermann(m, n-1))

for i in range(4):
    m = int(input('m='))
    n = int(input('n='))
    print(ackermann(m, n))
```

程式需使用者輸入 m 與 n 的值,利用 for 迴圈可以進行多次的測試

```
E:\Lectures\Programming110B\notebook\chap06_new\ackermann_new.py - Notepad++
檔案(F) 編輯(E) 搜尋(S) 檢視(V) 編碼(N) 語言(L) 設定(T) 工具(O) 巨集(M) 執行(R) 外掛(P) 視窗(W) ?

            License: <a href="http://creativecommons.org/licenses/by/4.0/">http://creativecommons.org/licenses/by/4.0/</a>
   10
           from __future__ import print_function, division
  13
  14
   15
        def ackermann(m, n):
                   """Computes the Ackermann function A\left(m,\ n\right)
  16
  17
                   See <a href="http://en.wikipedia.org/wiki/Ackermann_function">http://en.wikipedia.org/wiki/Ackermann_function</a>
   18
   19
  20
                   n, m: non-negative integers
  21
  22
                   if m == 0:
  23
                          return n+1
                   if n == 0:
   24
         return ackermann (m-1, 1)
   26
                   return ackermann(m-1, ackermann(m, n-1))
   27
   29

\Box
for i in range(4):
   30
                   m = int(input('m='))
  31
                   n = int(input('n='))
                   print(ackermann(m, n))
Anaconda Prompt (Anaconda3)
                                                                                                                                        base) E:\Lectures\Programming110B\notebook\chap06_new>python ackermann_new.py
 =5
'raceback (most recent call last):

```

三、利用 redirection (轉向) 輸入資料

利用 Anaconda Prompt 執行程式

- 1.切換磁碟、目錄,找到程式和測試資料所在的目錄
- 2. 輸入以下指令執行程式

python ackermann_new.py < testdata.txt</pre>

- "<" 代表資料流動的方向
- 在執行 ackermann_new.py 程式的時候,會將 testdata.txt 的內容做為程式的輸入資料來源
